software contribute to
the competitiveness of
the apparel sector?

04 How can REACH Cut Planner software contribute to the competitiveness of the apparel sector?

REACH Cut Planner software significantly enhances the competitiveness of the apparel sector through several key contributions:

1. Fabric Optimization and Cost Reduction

Minimization of Fabric Waste:

The REACH Cut Planner employs advanced artificial intelligence to optimize the allocation of markers, plies, and rolls, thereby minimizing fabric waste.

This is crucial as fabric costs can constitute 60-80% of apparel manufacturing costs, and any reduction in waste directly impacts profitability.

Automated Processes:

By automating complex processes such as marker allocation, plies allocation, spread planning, and rolls management, the REACH Cut Planner reduces the likelihood of human error and repetitive tasks, leading to more efficient use of materials.

2. Operational Efficiency

Improved Productivity:

The automation of the "thinking process" in the cutting room allows for faster and more accurate planning, which boosts overall productivity.

This efficiency helps in meeting delivery schedules and maintaining customer satisfaction

Data-Driven Decision Making:

REACH Cut Planner captures and analyzes cutting room data, providing valuable insights that enable informed management decisions.

This data-driven approach supports better planning and operational adjustments

3. Environmental Impact

Reduction in Environmental Footprint:

By significantly reducing fabric wastage, the software contributes to a greener production process, which is increasingly important in an industry known for its environmental impact

4. Market Competitiveness

Customer Retention and Acquisition:

The ability to reduce costs and ensure timely delivery enhances customer satisfaction and loyalty.

Additionally, these efficiencies can help attract new customers by offering competitive pricing and reliable service

Professional Development:

Training programs on REACH Cut Planner improve employability for professionals in the digital fashion value chain, further integrating advanced technology into the industry's workforce

Overall, REACH Cut Planner not only optimizes resource usage but also enhances operational efficiency and sustainability, making it a valuable tool for increasing competitiveness in the apparel sector.
